## Polygons in Mathematical Context

central angle =  $(\pi \times 2) \div N$   
 working angle =  $(\pi \times 2) \div (N \times 2)$   
 plan angle =  $(\pi - \text{central angle}) \div 2$   
 exterior angle = plan angle  $\times 2$

S is the length of any side of the polygon  
 N is the number of sides  
 R is the Radius of the circumscribed circle  
 apothem is the Radius of the inscribed circle  
 pi is PI, approximately 3.14159

pi, in mathematics, is the ratio of the circumference of a circle to its diameter  
 $\pi = \text{Circumference} \div \text{Diameter}$

apothem =  $R \times \cos(\pi \div N)$   
 apothem =  $S \div (2 \times \tan(\pi \div N))$   
 Radius =  $S \div (2 \times \sin(\pi \div N))$   
 Radius =  $0.5 \times S \times \csc(\pi \div N)$   
 $S = 2 \times \text{Radius} \times \sin(\pi \div N)$   
 $S = \text{apothem} \times (\tan(((\pi \times 2) \div (N \times 2))) \times 2)$   
 $S = R \times \sin(\text{central angle} \div 2) \times 2$   
 $S = R \times \sin(\text{working angle}) \times 2$

## Polygons in Carpenters Mathematical Context

central angle =  $360 \div N$   
 working angle =  $360 \div (N \times 2)$   
 plan angle =  $(180 - \text{central angle}) \div 2$   
 exterior angle = plan angle  $\times 2$   
 projection angle A =  $360 \div N$   
 projection angle B =  $90 - \text{projection angle a}$

apothem =  $R \times \cos(180 \div N)$   
 Radius =  $S \div (2 \times \sin(180 \div N))$   
 $S = 2 \times \text{Radius} \times \sin(180 \div N)$   
 Projection A =  $S \div \cos(\text{angle A})$   
 Projection B =  $S \div \cos(\text{angle B})$

apothem multiplier =  $\sec((\pi \times 2) \div (N \times 2))$   
 working angle multiplier =  $\tan(360 \div (N \times 2)) \times 2$   
 rafter multiplier =  $1 \div \cos(\text{pitch angle})$   
 hip multiplier =  $1 \div \cos(\text{hip angle})$   
 rise multiplier =  $1 + \tan(\text{pitch angle})$

Hip Rafter Run = Common Rafter Run  $\times$  apothem multiplier  
 Common Rafter Run =  $S \div \text{working angle multiplier}$   
 $S = \text{Common Rafter Run} \times \text{working angle multiplier}$   
 Common Rafter Run = apothem  
 Common Rafter Span = Common Rafter Run  $\times 2$   
 Hip Rafter Run = Radius

## What Is A Polygon Roof

What is a Polygon?

A closed plane figure made up of several line segments that are joined together. The sides do not cross each other. Exactly two sides meet at every vertex. A regular polygon is a polygon whose sides are all the same length, and whose angles are all the same. The sum of the interior angles of a polygon with  $n$  sides, where  $n$  is 3 or more, is  $360^\circ$  degrees.

In a circle of radius  $r$ , the length of the chord that subtends a central angle  $x$  is

$$2 \times r \times \sin(x/2)$$

What is a Polygon Roof?

Three or more equal length walls that are joined together. The equal length walls do not cross each other. Exactly two sides meet at every vertex. The polygonal hip rafters bisect each vertex of the polygon. When the polygonal hip rafters bisect the corner vertices the roof rafter pitch is the same for both sides of the wall. The radius of the polygon is the run of the polygonal hip rafters and the chord is the length of the sides of the polygon.

In a polygonal roof with an hip rafter run equal to the radius, the Side Wall Length is

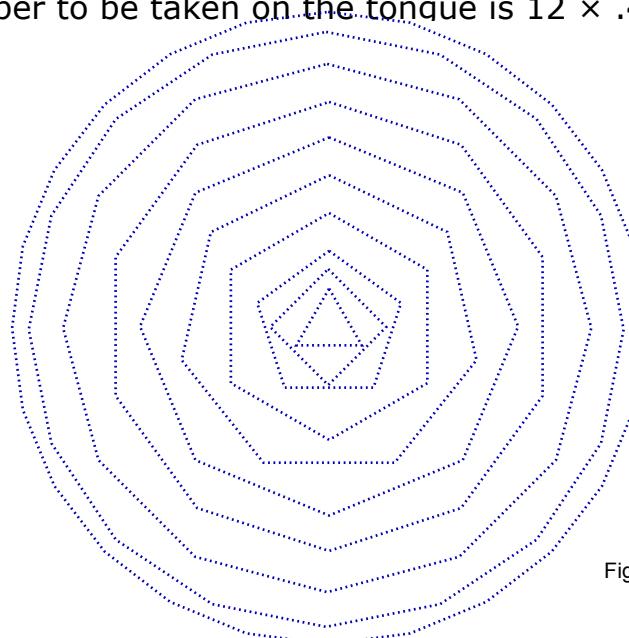

$$2 \times \text{hip rafter run} \times \sin((360^\circ / \text{Number of Sides}) / 2)$$

What is a Polygon Roof Miter Angle?

The polygon roof miter angle is the tangent of the polygon central angle divided by two. The central angle for an Octagon roof is  $45^\circ$ . One half of  $45^\circ$  is  $22.5^\circ$ . The tangent of  $22.5^\circ = .41421$

Laying out an Octagon using a framing square we would take 12" on the blade and the number to be taken on the tongue is  $12 \times .41421$ , which is 4.97" , or

Polygons have 3 or more sides.  
Polygon roofs range from 3 - 24 sides.

Trigon - 3 sides  
Square - 4 sides  
Pentagon - 5 sides  
Hexagon - 6 sides  
Heptagon - 7 sides  
Octagon - 8 sides  
Nonagon - 9 sides  
Decagon - 10 sides  
Dodecagon - 12 sides  
Hexadecagon - 16 sides  
Icositetragon - 24 sides

jack rafter multiplier = **cotangent**(working angle)

jack rafter multiplier =  $1 \div \tan(\text{working angle})$

jack rafter length difference = (jack rafter multiplier  $\times$  O.C.  $\times$  common rafter length per foot)  $\div 12$

jack rafter per inch multiplier = (**tan**(plan angle)  $\times$  rafter length per foot)  $\div 12$

adjacent run =  $12 \div \tan(\text{working angle})$

unit rise =  $12 \times \tan(\text{pitch angle})$

CMC irregular pitch angle = **arctan**(unit rise  $\div$  adjacent)

## How To Use The Polygon Rafter Tables

Each **Polygon Rafter Table** has the basic information that will help figure out all of the polygon roof pitch angles and polygon rafter lengths from a zero pitched roof upto a roof pitch of 24 & 12. The polygon rafter tables are referenced by the number of sides in the polygon with the name of the polygon given if it has less than 16 sides. All polygon roofs with more than 16 sides are referenced as N - gon. With N being the number of sides in the polygon. At the bottom of each **Polygon Rafter Table** there are framing square usage examples. Referr to the **Framing Square Usage** page on how to use the framing square information show on each page.

Top Of Page:

Number Of Sides of Polygon

**central angle** of the polygon (  $360^\circ \div N$  )

**working angle** of the polygon (  $180^\circ \div N$  )

**plan angle** of the polygon (  $180^\circ - \text{central angle}$  )  $\div 2$

**miter angle** is the exterior plate line bisect miter and angle. Use the miter angle and 12" on the framing square to mark the bisect angle. Or set your speed square to the degrees of the miter to mark the bisect angle.

**hip run per foot** is the diagonal length of a triangle formed by the miter angle and 12". You would use the pitch of the polygon roof on the tongue of the framing square and the hip run per foot on the blade of the framing square to layout the plumb and level cuts for the polygon hip rafter.

**apothem multiplier** can be used to find the hip rafter run of the polygon if you know the common rafter run. The apothem multiplier  $\times$  common rafter run will give you the length of the hip rafter run. Or if you already know the hip rafter run you can divide the hip rafter run by the apothem multiplier to calculate the length of the common rafter run.

**side wall multiplier** can be used to calculate the length of the polygon roof side walls. The side wall multiplier  $\times$  the common rafter run gives the length of the polygon side walls.

### Polygon Rafter Table

Column 1: Shows the **Pitch** of the roof from 0 to 24

Column 2: Shows the **Roof Angles**. The first column is the **Roof Pitch Angle** and the next column is the **Hip Pitch Angle** in degrees.

Column 3: Shows the **Frieze Block Angles**. The first column is the plumb **Angle** and the next column is the **Saw Bevel** angle to cut frieze blocks that butt into the hip rafters. Use your speed square to mark off the plumb angle.

### Column 4: Hip Rafters

**Side Cut Angle** column is the hip rafter side cut angle in degrees.

**Backing Angle** column is the hip rafter backing angle in degrees. Do not back out the hip rafter if you drop the hip rafter seat cut. Use one method or the other but do not use both.

**Hip Drop 2x** column is the amount to drop-reduce the height of the hip rafter seat cut to plane with the common rafters at the plate line intersection. This dimension is for 2x hip rafter material. (1.5")

**Hip Drop 4x** is the amount to drop-reduce the height of the hip rafter seat cut to plane with the common rafters at the plate line intersection. This dimension is for 4x hip rafter material. (3.5")

**Length Per-FT** column is the length of the hip rafter per one foot of run. You can use this dimension on the blade of the framing square to mark off the hip rafter side cut angle and backing angle. See the Framing Square Usage sheet for the dimension to use on the tongue of the framing square.

## How To Use The Polygon Rafter Tables Continued

### Colum 5: **Jack Rafters**

**Side Cut Angle** column is the jack rafter side cut angle in degrees. Use your speed square to mark off this angle on top of the jack rafter to cut the cheek cut of the jack rafter.

**First 12"** column is the length of the jack rafter from plumb to plumb of the long point of the jack rafter spaced 12" from the corner where the hip rafter sits. The length of the jack rafter has been calculated to set 12" and head of the 12" layout mark. The length of the jack rafter has been reduced for 2x hip rafter material.

**First 16"** column is the length of the jack rafter from plumb to plumb of the long point of the jack rafter spaced 16" from the corner where the hip rafter sits. The length of the jack rafter has been calculated to set 16" and head of the 16" layout mark. The length of the jack rafter has been reduced for 2x hip rafter material.

**First 24"** column is the length of the jack rafter from plumb to plumb of the long point of the jack rafter spaced 24" from the corner where the hip rafter sits. The length of the jack rafter has been calculated to set 24" and head of the 24" layout mark. The length of the jack rafter has been reduced for 2x hip rafter material.

**Spaced 12"** column is the jack rafter length difference for 12 inch on center spacing. All jack rafters will increment by this dimension when spaced 12" O.C. at the plate line.

**Spaced 16"** column is the jack rafter length difference for 16 inch on center spacing. All jack rafters will increment by this dimension when spaced 16" O.C. at the plate line.

**Spaced 24"** column is the jack rafter length difference for 24 inch on center spacing. All jack rafters will increment by this dimension when spaced 24" O.C. at the plate line.

**Multiplier** column can be used to calculate the length of the jack rafter for any spacing. The multiplier times the desired spacing will give you the jack rafter length. As an example, if you want to place a jack rafter 24" from your king common rafter you would use  $24 \times 2.90152$  for the jack rafter length difference from your king common rafter length.

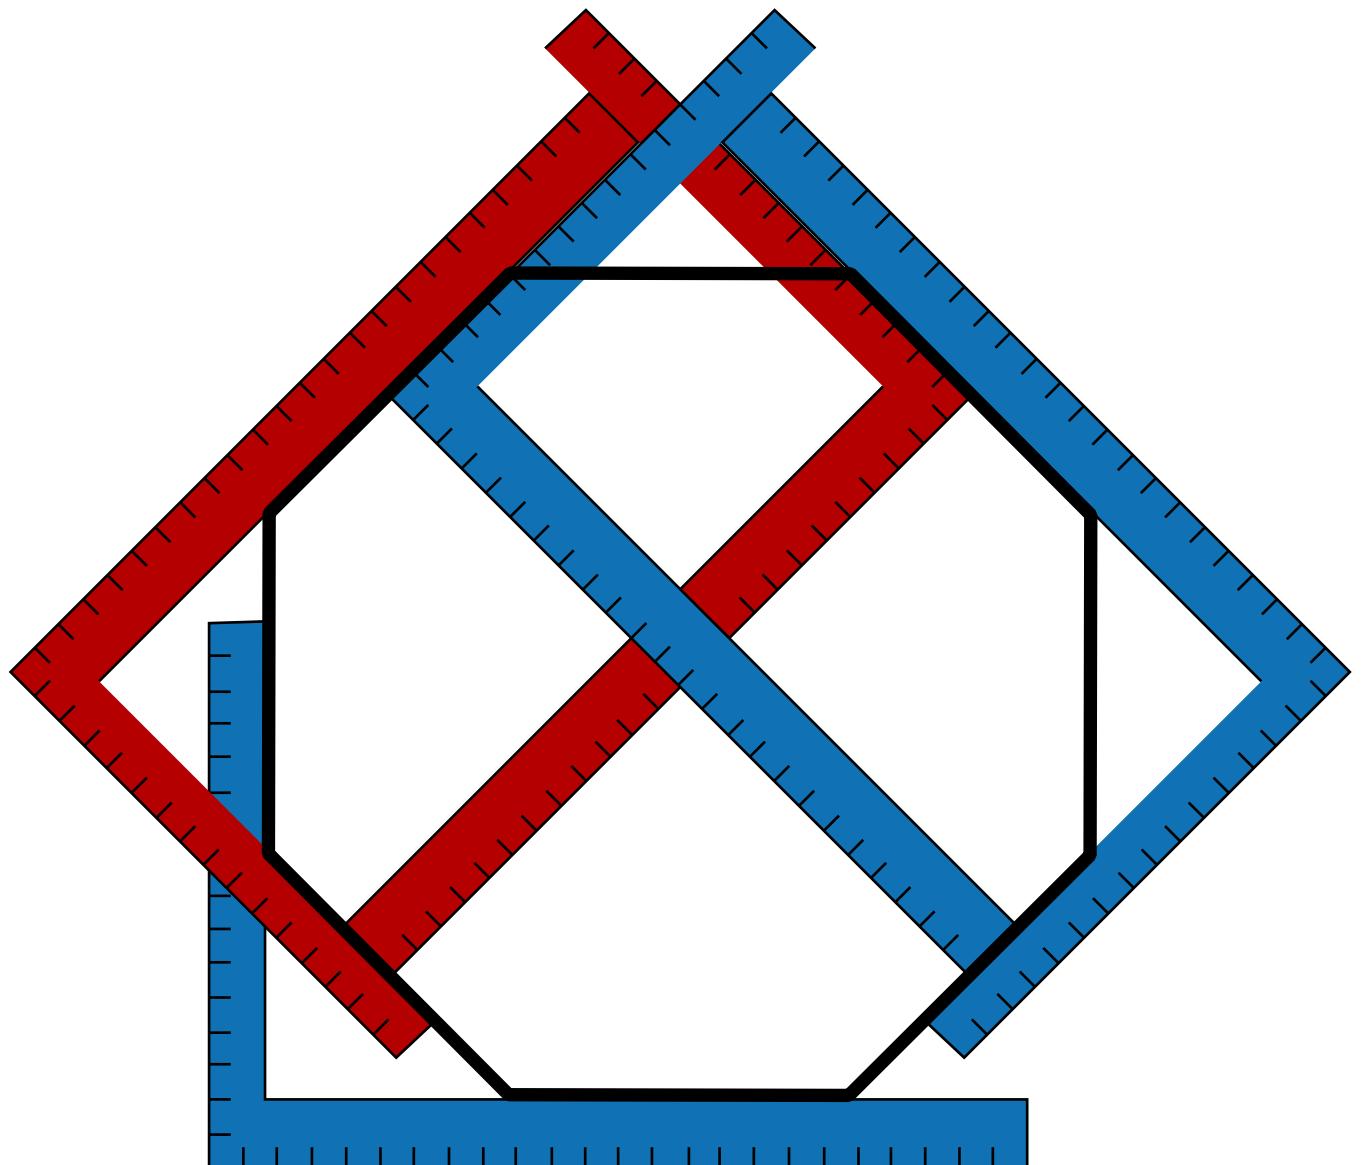

Octagon Example

$$8:12 \text{ -- } 24 \times 2.90152 = 69.66" = 69 \frac{5}{8}"$$

Hexagon Example

$$6:12 \text{ -- } 24 \times 1.93649 = 46.47" = 46 \frac{1}{2}"$$

## Polygon Framing Square Usage

## Framing Square Usage For Plumb & Level Cuts

**P = Roof Pitch**

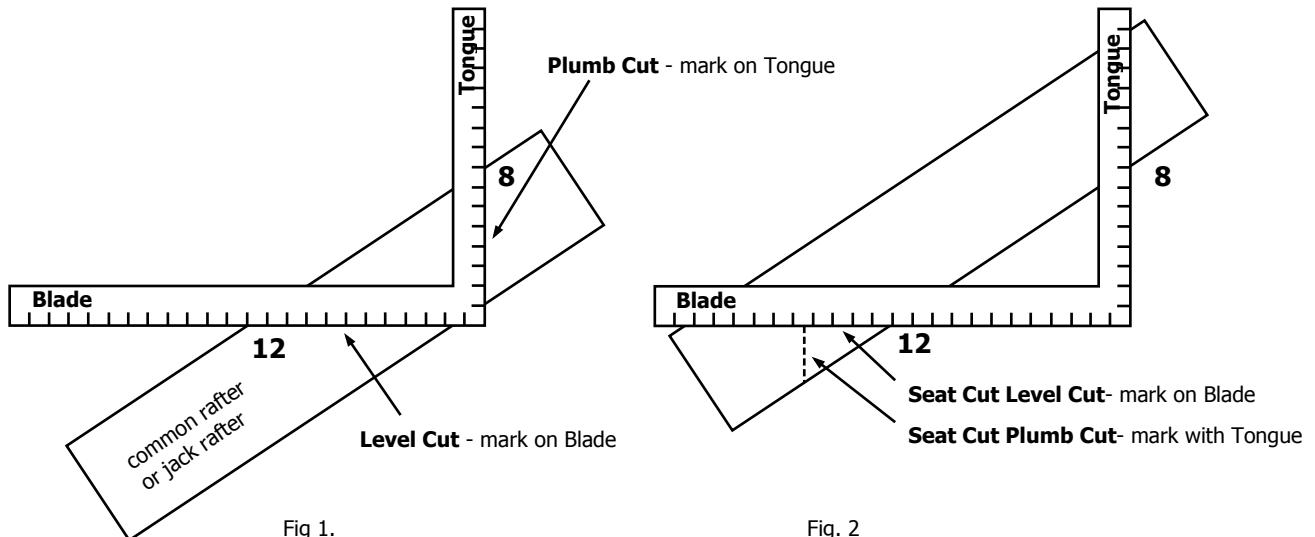

**HR = Hip Run Per Foot**

**Tongue ( P ) Blade (12 )** for Rafter Plumb Cut Angle. See Fig 1.

SS Angle is the roof pitch angle in degrees. Set your speed square at the SS Angle to mark plumb cut lines.

**Tongue ( 12 ) Blade (P )** for Rafter Level Cut Angle. See Fig 2.

SS Angle is the roof pitch level cut angle in degrees. Set your speed square at the SS Angle to mark level cut lines.

**Tongue ( P ) Blade (HR )** for Hip Rafter Plumb Cut Angle. See Fig 3.

SS Angle is the hip pitch angle in degrees. Set your speed square at the SS Angle to mark hip rafter plumb cut lines.

**Tongue ( HR ) Blade (P )** for Hip Rafter Level Cut Angle. See Fig 4.

SS Angle is the hip pitch level cut angle in degrees. Set your speed square at the SS Angle to mark hip rafter level cut lines.

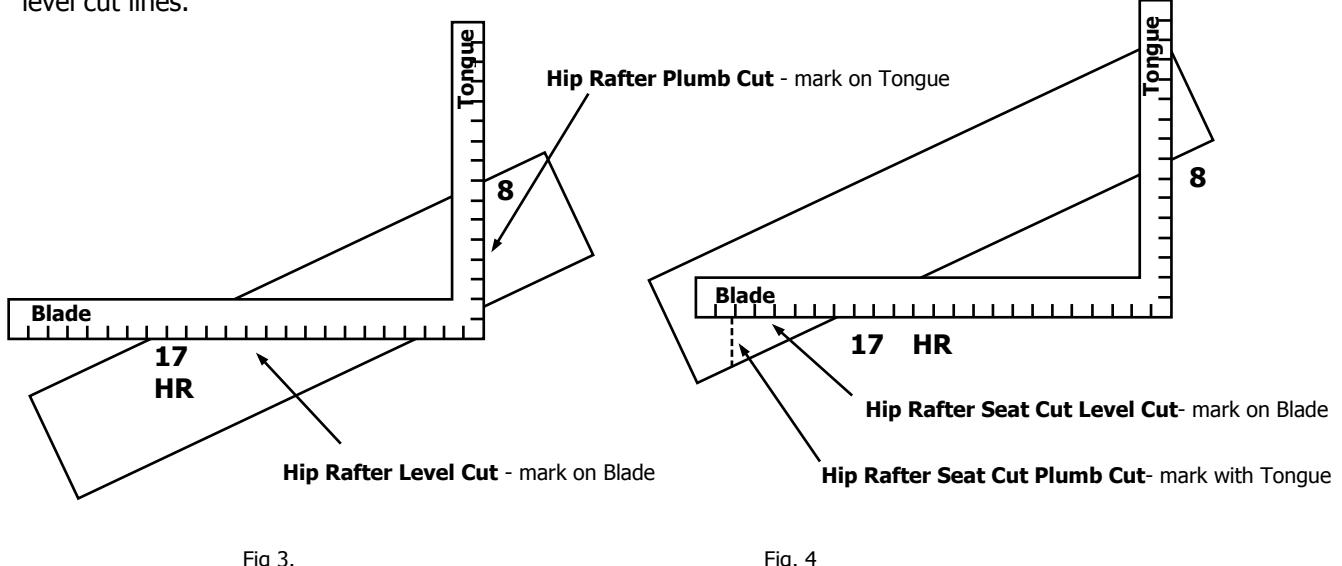

Fig 3.

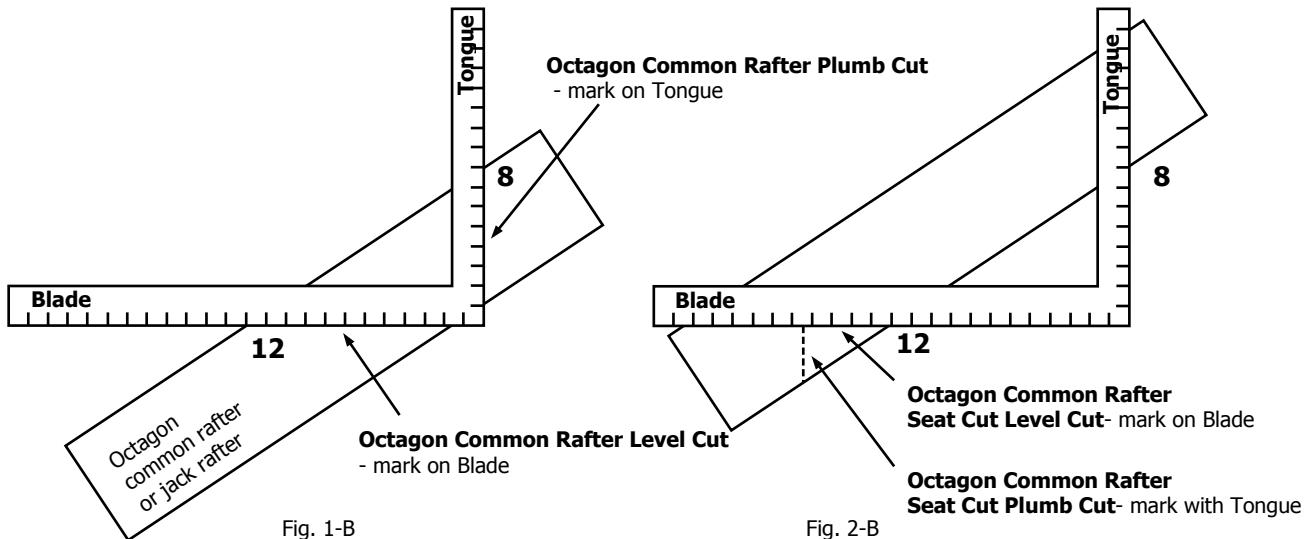

Fig. 4

## Framing Square Usage For Octagons

**P = Roof Pitch**

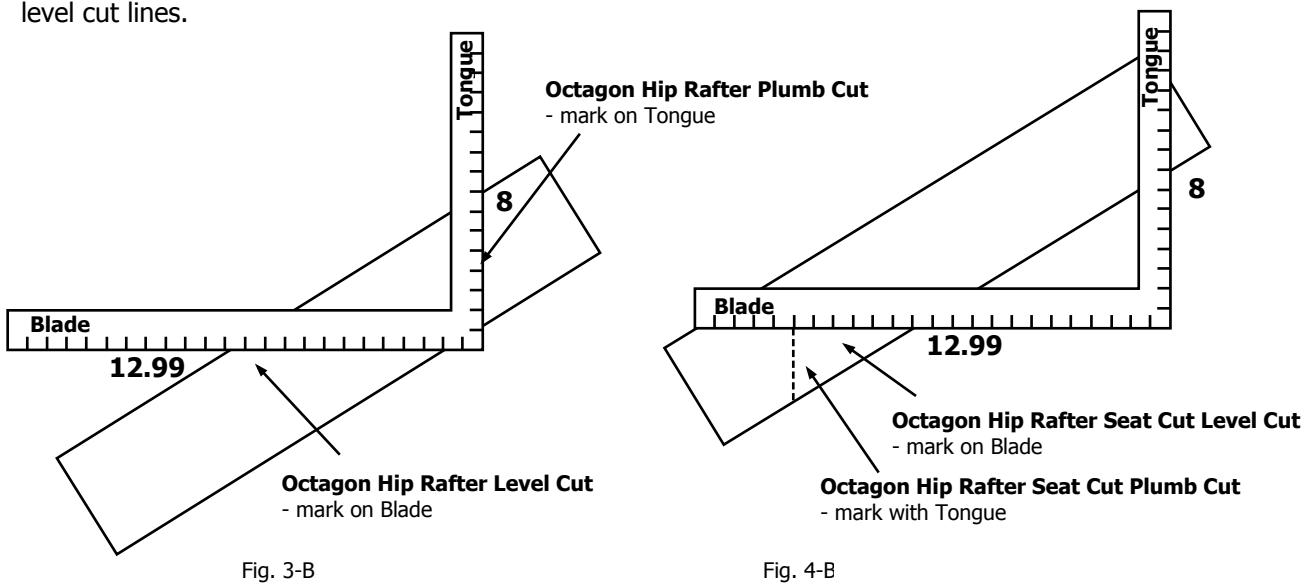

**Tongue ( P ) Blade (12 )** for Octagon Common Rafter Plumb Cut Angle. See Fig 1-B.  
 SS Angle is the roof pitch angle in degrees. Set your speed square at the SS Angle to mark plumb cut lines.

**Tongue ( 12 ) Blade (P )** for Octagon Common Rafter Level Cut Angle. See Fig 2-B.  
 SS Angle is the roof pitch level cut angle in degrees. Set your speed square at the SS Angle to mark level cut lines.

**Tongue ( P ) Blade (12 )** for Octagon Hip Rafter Plumb Cut Angle. See Fig 3-B.  
 SS Angle is the hip pitch angle in degrees. Set your speed square at the SS Angle to mark hip rafter plumb cut lines.

**Tongue ( 12.99 ) Blade (P )** for Octagon Hip Rafter Level Cut Angle. See Fig 4-B.  
 SS Angle is the hip pitch level cut angle in degrees. Set your speed square at the SS Angle to mark hip rafter level cut lines.

## Framing Square Usage For Hip Rafter Side Cut

**HM = Hip Rafter Miter Angle**

**HL = Hip Rafter Length Per Foot Of Run**

**Tongue ( HM ) Blade ( HL )** for Hip Rafter Side Cut Angle. See Fig 7.

SS Angle is the hip pitch side cut angle in degrees. Set your speed square at the SS Angle to mark the hip rafter side cut lines. Set your saw to the **Saw Angle** to produce the compound speed square angle to cut the hip rafter side cut angle. The **HM** angle is calculated using the following Trigonometry formulas.

Hip Side Cut Angle =  $\arctan (\cos(\text{hip pitch angle}) \div \tan(\text{plan angle}))$

**HM** =  $\tan(\text{Hip Side Cut Angle}) \times \text{hip rafter length per foot of run}$

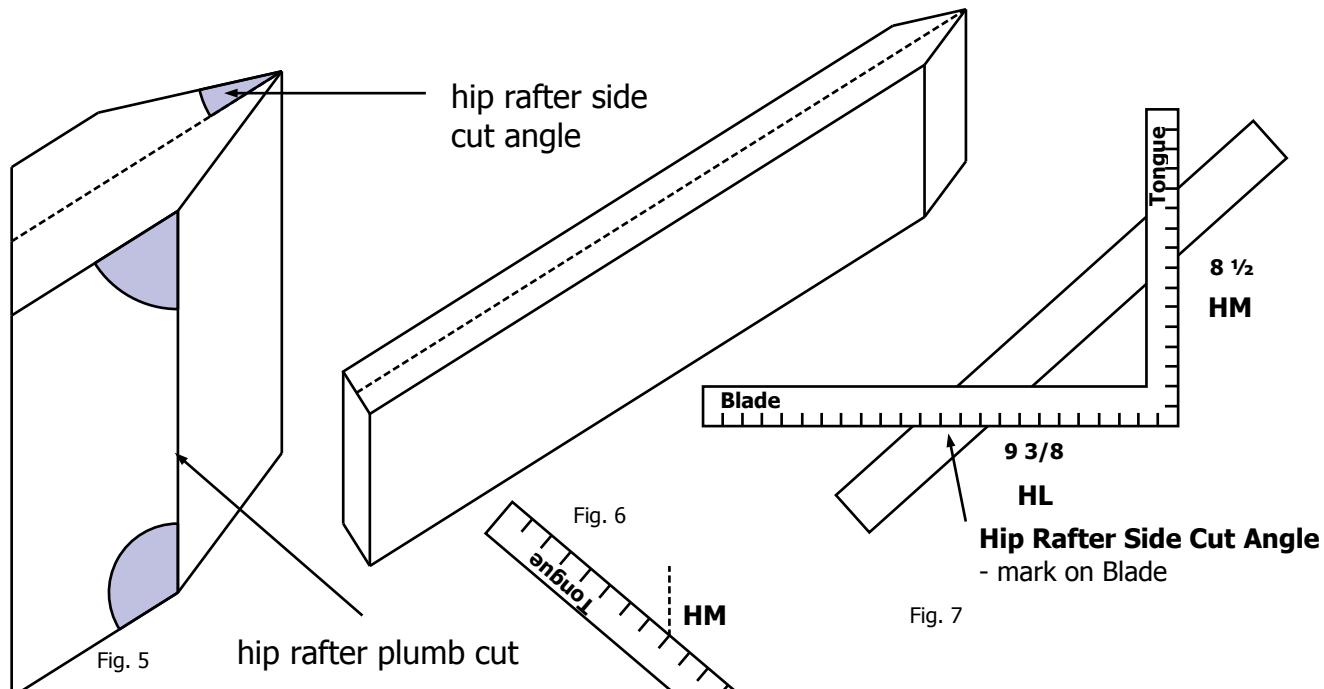

If the **hip rafter length** or **HM** angle is longer than the length of the framing square blade or tongue then you can divide both of the numbers by 2 to produce the same hip rafter side cut angle.

Example:

8:12 pitch

**HL** =  $18\frac{3}{4} \div 2 = 9\frac{3}{8}$

**HM** =  $17 \div 2 = 8\frac{1}{2}$

## Framing Square Usage For Hip Rafter Backing

**HL = Hip Rafter Length Per Foot Of Run**  
**HRBM = Hip Rafter Backing Miter Angle**

**Tongue ( HRBM ) Blade ( HL )** for Hip Rafter Backing Angle. See Fig 9.

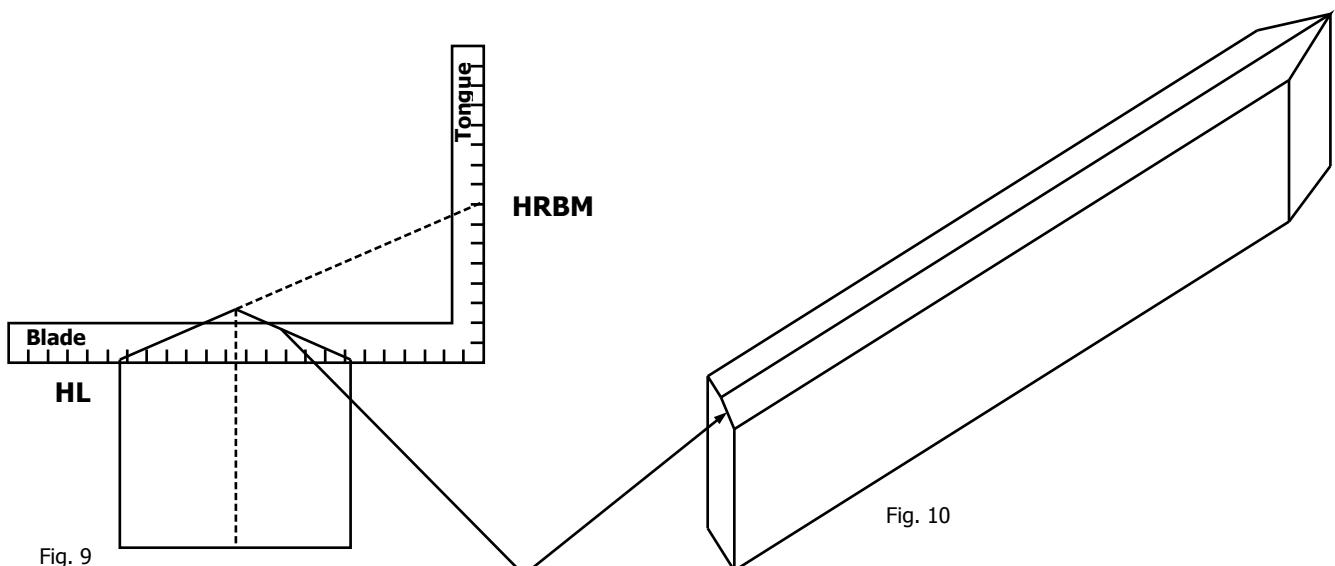

SS Angle is the hip backing angle in degrees. Set your speed square at the SS Angle to mark hip rafter backing line. The hip rafter backing bevel angle can be marked off on the side of the hip rafter by transferring the height from the end view of the hip rafter shown in Fig. 11. After you have marked the backing line on the side of the hip rafter set your saw to the hip rafter backing angle to cut the bevel cut.

The **HRBM** angle is calculated using the following Trigonometry formulas.

Hip Backing Angle =  $\arctan(\sin(\text{hip pitch angle}) \div \tan(\text{plan angle}))$

**HRBM** =  $\tan(\text{Hip Backing Angle}) \times \text{hip rafter length per foot of run}$

The **HRBM** can be found in the **Polygon Hip Rafter Backing Miter Table**. The table has a list of all the **Polygon Hip Rafter Backing Miters** for pitches 0 - 24.

## Framing Square Usage For Jack Rafter Side Cut

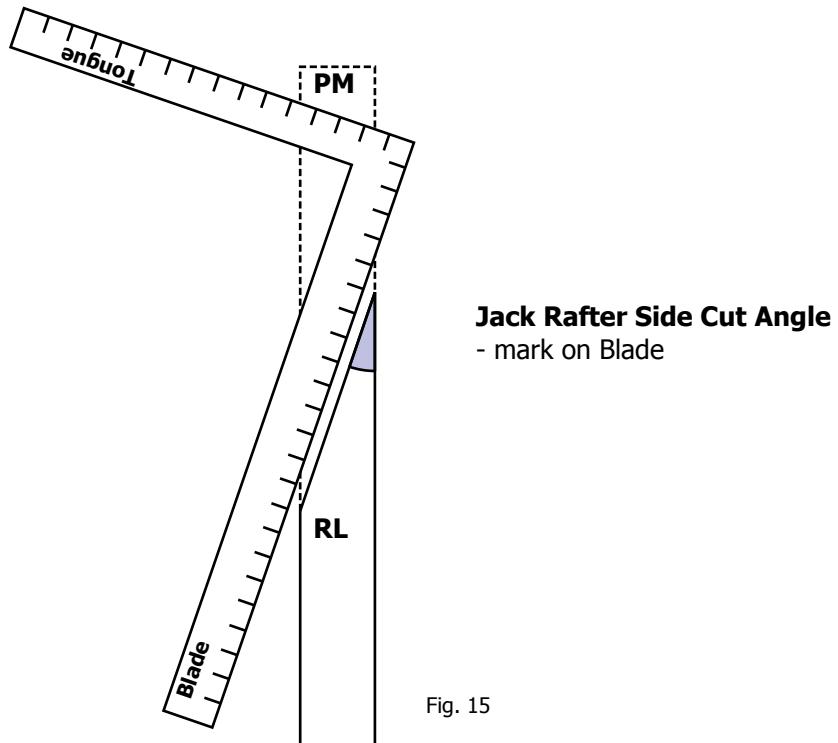

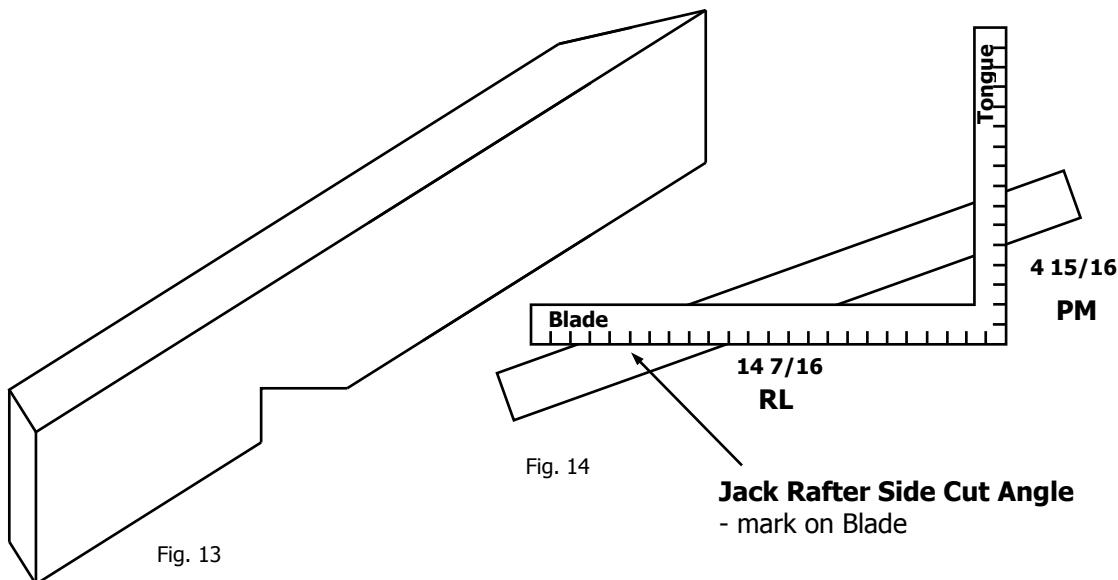

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**Tongue ( PM ) Blade ( RL )** for Jack Rafter Side Cut Angle. See Fig 14.

SS Angle is the jack rafter side cut angle in degrees. Set your speed square at the SS Angle to mark jack rafter side cut angle line. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the jack rafter plumb cut line to produce the compound angle of the speed square angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

## Framing Square Usage For Purlin Rafters

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**HRBM = Hip Rafter Backing Miter Angle**

**Tongue ( HRBM ) Blade (RL) for Purlin Rafter Plumb Cut Bevel Angle.** See Fig 20.

SS Angle is the purlin rafter bevel cut angle in degrees. Set your speed square at the SS Angle to mark the purlin rafter bevel angle line. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the purlin rafter plumb bevel cut line to produce the compound angle of the speed square angle.

**Tongue ( PM ) Blade (RL) for Purlin Rafter Cross Cut Miter Angle.** See Fig 17.

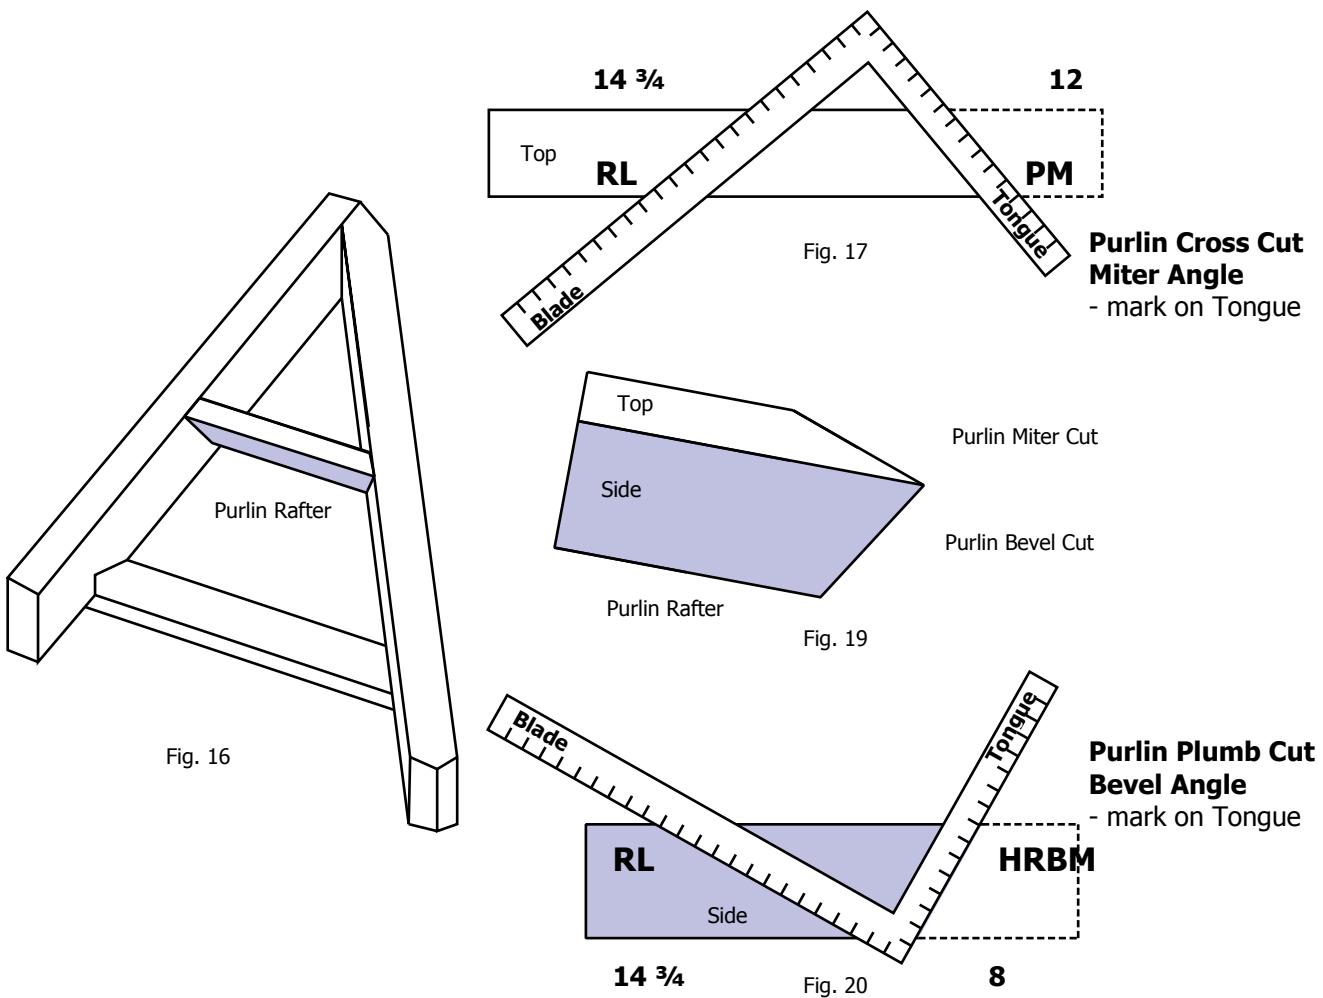

SS Angle is the purlin rafter cross cut miter angle in degrees. Set your speed square at the SS Angle to mark the purlin rafter cross cut angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

The **HRBM** can be found in the **Polygon Hip Rafter Backing Miter Table**. The table has a list of all the **Polygon Hip Rafter Backing Miters** for pitches 0 - 24.

**Note:**

**These framing square dimensions and angle are for cutting across the top of the purlin rafter. The same way you would cut roof sheathing.**

## Framing Square Usage For Roof Sheathing

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**HRBM = Hip Rafter Backing Miter Angle**

**Tongue ( HRBM ) Blade (RL) for Roof Sheathing Plumb Cut Bevel Angle.** See Fig 23.

SS Angle is the roof sheathing bevel cut angle in degrees. Set your speed square at the SS Angle to mark the roof sheathing bevel angle line. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the roof sheathing plumb bevel cut line to produce the compound angle of the speed square angle.

**Tongue ( PM ) Blade (RL) for Roof Sheathing Cross Cut Miter Angle.** See Fig 22.

SS Angle is the roof sheathing cross cut miter angle in degrees. Set your speed square at the SS Angle to mark the roof sheathing cross cut angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

The **HRBM** can be found in the **Polygon Hip Rafter Backing Miter Table**. The table has a list of all the **Polygon Hip Rafter Backing Miters** for pitches 0 - 24.

## Framing Square Usage For Frieze Blocks

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**HRBM = Hip Rafter Backing Miter Angle**

**Tongue ( HRBM ) Blade (RL) for Frieze Block Plumb Cut Miter Angle.** See Fig 27.

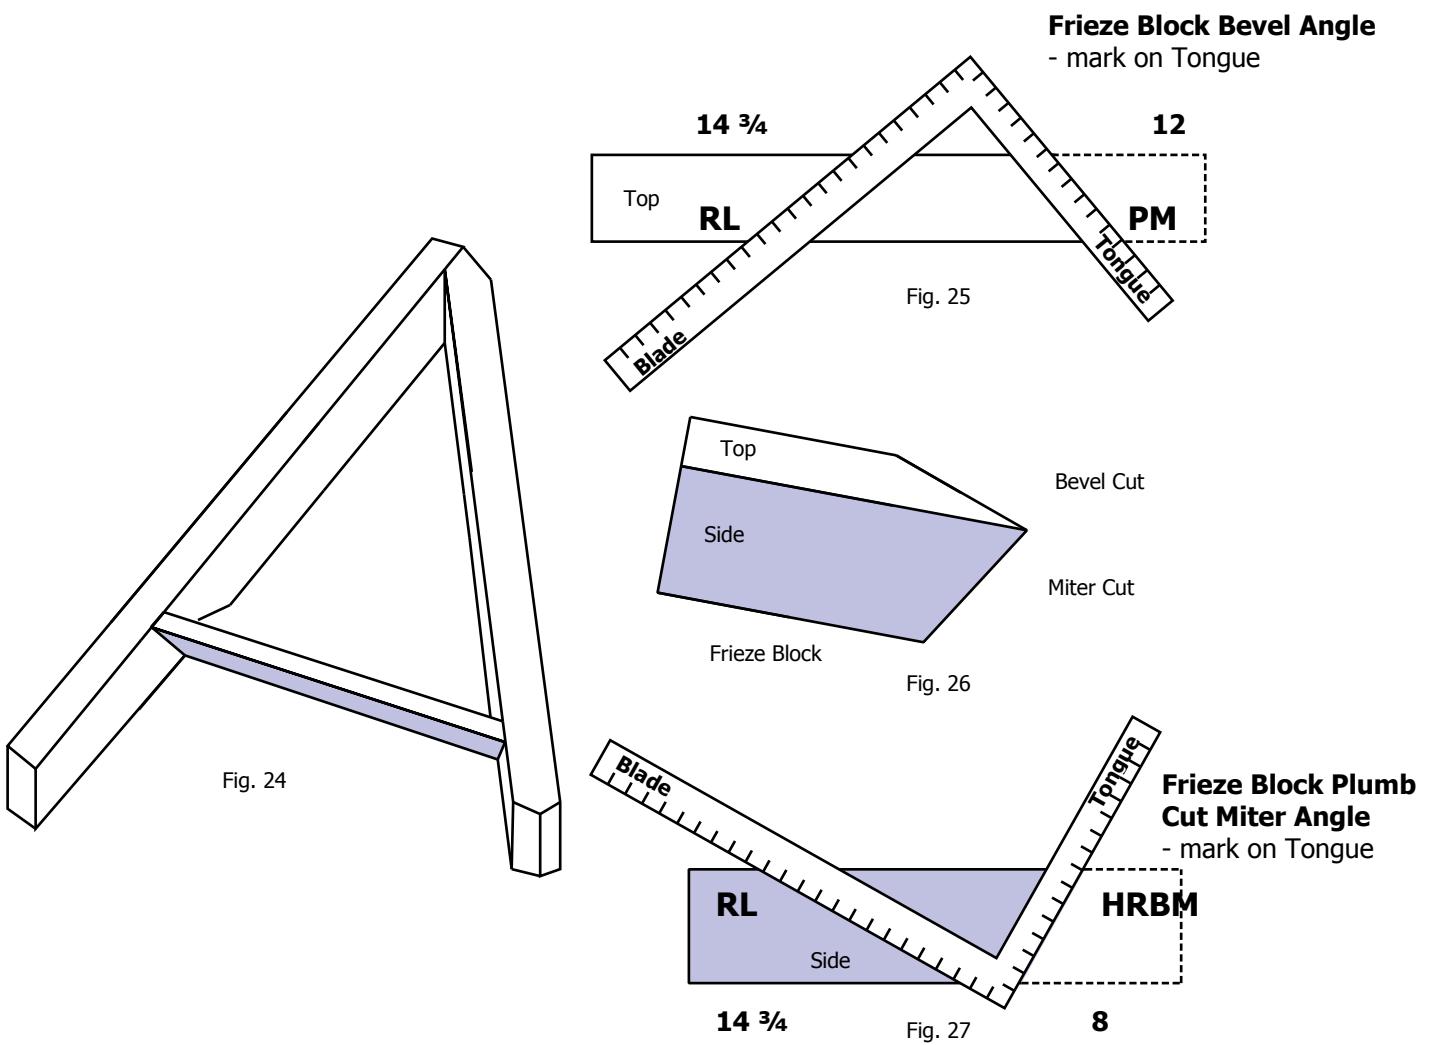

SS Angle is the frieze block plumb cut miter angle in degrees. Set your speed square at the SS Angle to mark the frieze block miter angle line.

**Tongue ( PM ) Blade (RL) for Frieze Block Bevel Angle.** See Fig 25.

SS Angle is the frieze block bevel angle in degrees. Set your speed square at the SS Angle to mark the frieze block bevel angle. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the frieze block bevel cut line to produce the compound angle of the speed square angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

The **HRBM** can be found in the **Polygon Hip Rafter Backing Miter Table**. The table has a list of all the **Polygon Hip Rafter Backing Miters** for pitches 0 - 24.

## Framing Square Usage For Square Tail Fascia

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**HRBM = Hip Rafter Backing Miter Angle**

**Tongue ( HRBM ) Blade (RL) for Square Tail Fascia Cut Miter Angle.** See Fig 27.

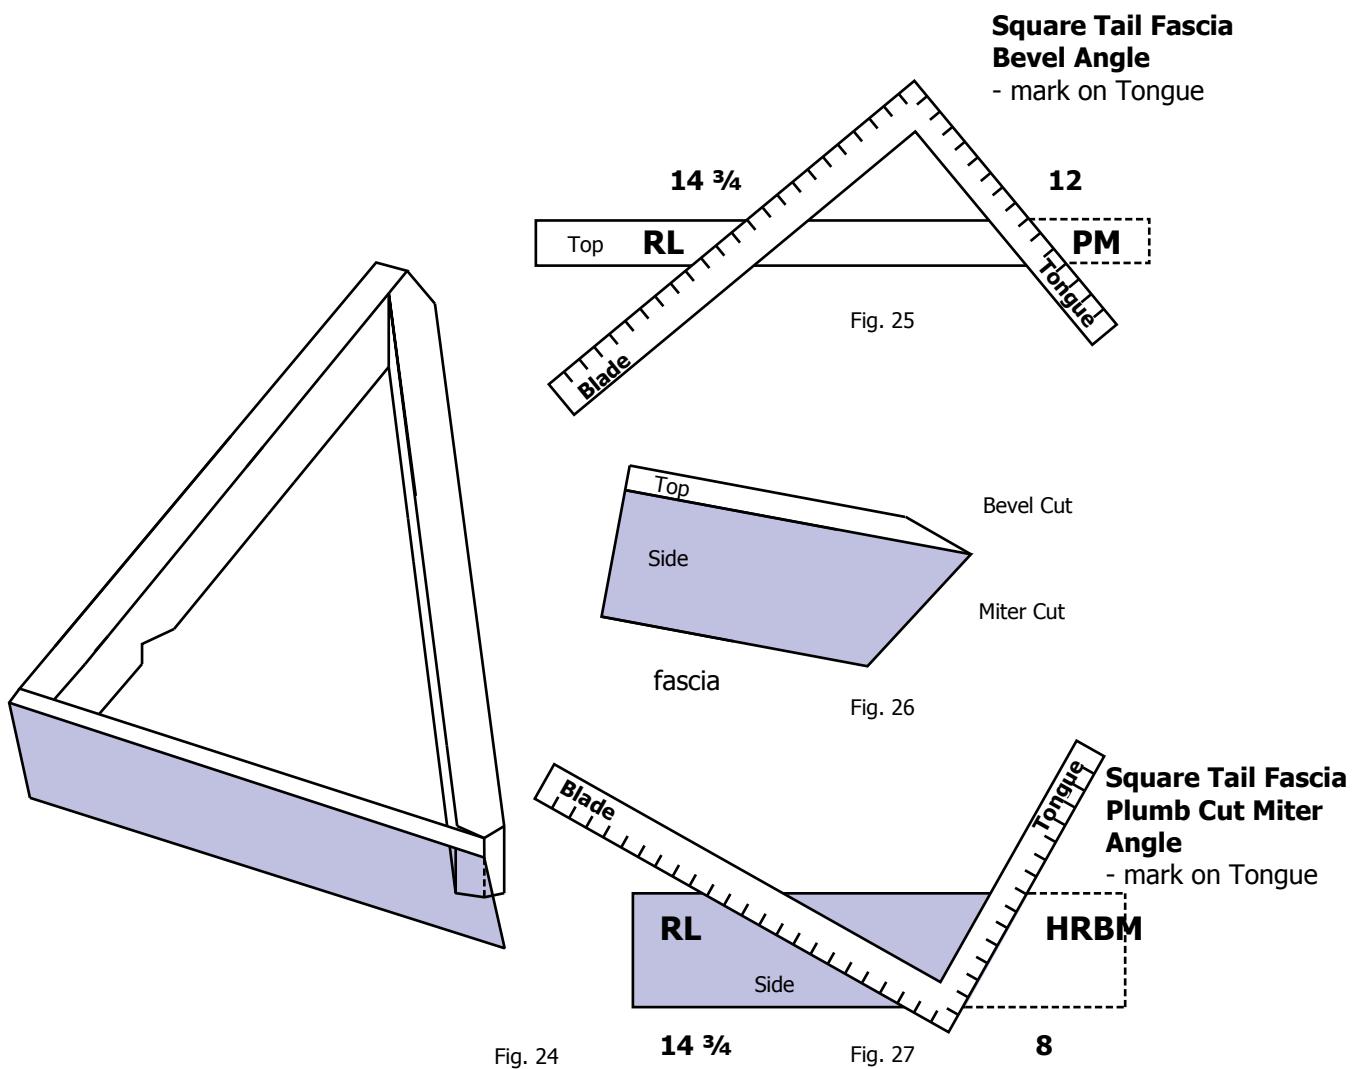

SS Angle is the square tail fascia plumb cut miter angle in degrees. Set your speed square at the SS Angle to mark the square tail fascia miter angle line.

**Tongue ( PM ) Blade (RL) for Square Tail Fascia Bevel Angle.** See Fig 25.

SS Angle is the square tail fascia bevel angle in degrees. Set your speed square at the SS Angle to mark the square tail fascia bevel angle. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the square tail fascia bevel cut line to produce the compound angle of the speed square angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

The **HRBM** can be found in the **Polygon Hip Rafter Backing Miter Table**. The table has a list of all the **Polygon Hip Rafter Backing Miters** for pitches 0 - 24.

## Framing Square Usage For Hip Rafter Square Tail Fascia

**RL = Rafter Length Per Foot Of Run**

**PM = Polygon Miter**

**HRSM = Hip Rafter Square Tail Miter Angle**

**Tongue ( HRSM ) Blade (PM )** for Hip Rafter Square Tail Fascia Cut Miter Angle. See Fig 31.

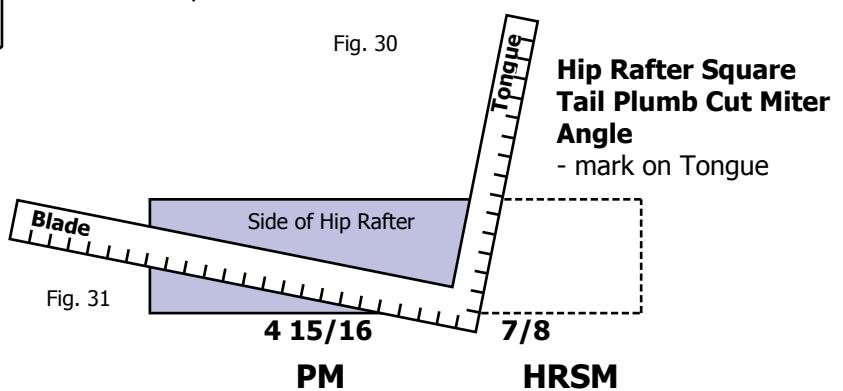

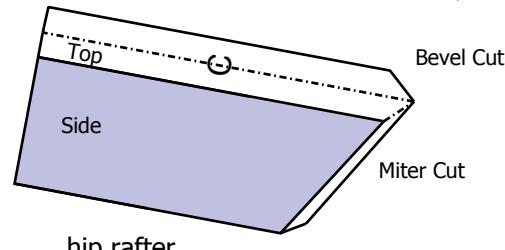

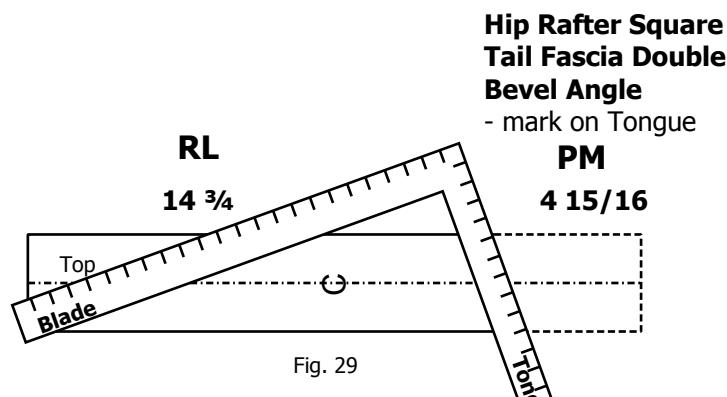

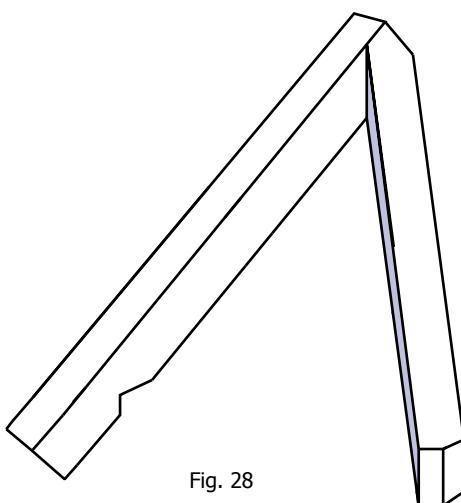

SS Angle is the hip rafter square tail fascia plumb cut miter angle in degrees. Set your speed square at the SS Angle to mark the hip rafter square tail fascia plumb cut miter angle line.

**Tongue ( PM ) Blade (RL )** for Square Tail Fascia Bevel Angle. See Fig 29.

SS Angle is the hip rafter square tail fascia bevel angle in degrees. Set your speed square at the SS Angle to mark the hip rafter square tail fascia bevel angle. If the **Saw Angle** is less than or equal to your saw miter table settings, then set your saw at the **Saw Angle** and cut the hip rafter square tail fascia bevel cut line to produce the compound angle of the speed square angle.

The **PM** can be found in the **Polygon Miters & Multipliers Table**. The table has a list of all the **Polygon Miters** for polygon from 3 sides to 48 sides.

The **HRSM** can be found in the **Polygon Hip Rafter Square Tail Miter Table**. The table has a list of all the **Polygon Hip Rafter Square Tail Miters** for pitches 0 - 24.

## Framing Square Usage For Miter Box Gable Moulding

**RL = Rafter Length Per Foot Of Run**  
**PM = Polygon Miter**

**HR = Hip Run Per Foot**  
**HP = Hip Pitch**

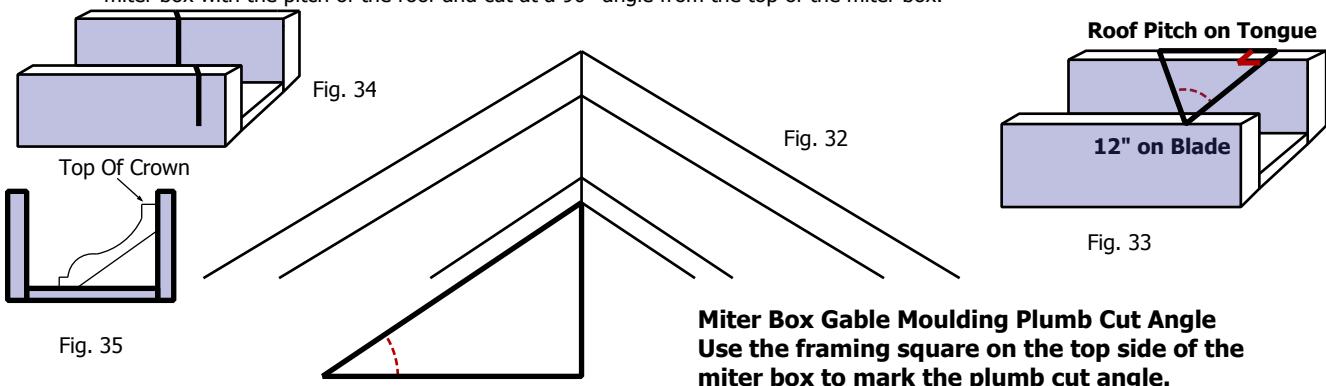

**Tongue ( P ) Blade (12 )** for Miter Box Gable Mould Plumb Cut Miter Angle. See Fig 33.

SS Angle is the miter box plumb cut miter angle in degrees. Set your speed square at the SS Angle to mark the miter box plumb cut miter angle line. The method of making a miter box for the sawing of rake mouldings is shown in Fig. 36. This method is for cutting the rake moulding on edge.

**Tongue ( PM ) Blade (12 )** for Polygon 2 Cord Miter Box Gable Bevel Angle. See Fig 37.

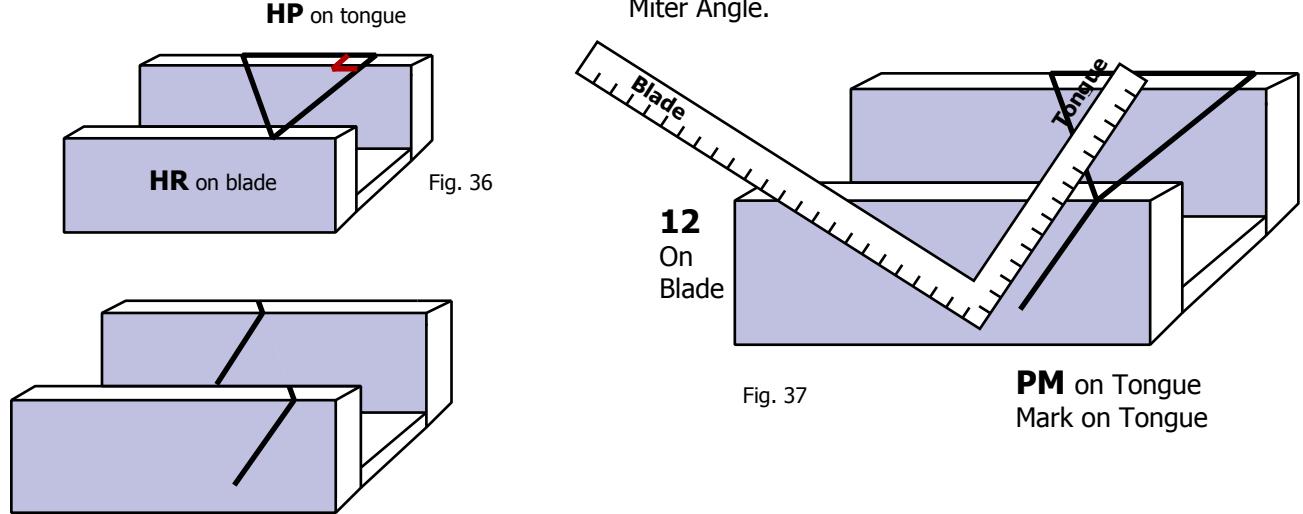

SS Angle is the miter box bevel angle in degrees. Set your speed square at the SS Angle to mark the miter box bevel angle. This only applies to the Polygon 2 Cord Rake Gable. Use 90° for a straight gable. See Fig. 34 for a straight gable.

Cut rake crown moulding on edge with top of crown up in miter box as in Fig. 35. Mark the top of the miter box with the pitch of the roof and cut at a 90° angle from the top of the miter box.

## Polygon 2 Cord Rake Gable Framing Square Usage

Top of miter box is the hip pitch plumb cut.  
 The side of miter box is the bevel cut, which is the Polygon Miter Angle.

The **Polygon 2 Cord Rake Gable** is cut similar to a standard rake gable. The miter across the top of the miter box is the hip pitch angle and the bevel is the polygon miter angle. The rake moulding is cut on edge in the miter box as seen in Fig. 35.

Example:

Octagon - 8:12 pitch

**Miter** = Hip pitch = 31.63°

**Bevel** = Polygon Miter = 22.5°

### 3 Sided Polygon Rafter Table ( 3 - gon )

central angle = 120°

working angle = 60°

plan angle = 30°

miter angle = 20.78 & 12 (60.00°)

hip run per foot = 24.00

apothem multiplier = 2.00000

side wall multiplier = 3.46410

Tongue (5.38) Blade (15.25) for Hip Side Cut Angle (SS Angle 19.43) (Saw Bevel Angle 67.50)

Tongue (3.31) Blade (15.25) for Hip Backing Angle (SS Angle 12.26)

Tongue (4.97) Blade (14.42) for Jack Rafter Side Cut Angle (SS Angle 19.02) (Saw Bevel Angle 67.50)

Tongue (3.31) Blade (14.42) for Purlin Rafter Plumb Cut Angle (SS Angle 12.94) (Saw Bevel Angle 12.26)

Tongue (4.97) Blade (14.42) for Purlin Rafter Cross Cut Angle (SS Angle 19.02)

Tongue (3.31) Blade (14.42) for Roof Sheathing Plumb Cut Angle (SS Angle 12.94) (Saw Bevel Angle 12.26)

Tongue (4.97) Blade (14.42) for Roof Sheathing Cross Cut Angle (SS Angle 19.02)

Tongue (8.00) Blade (12.00) for Miter Box Gable Mould Plumb Cut Angle (SS Angle 33.69)

Tongue (8.00) Blade (12.99) for Miter Box 2 Cord Polygon Gable Mould Hip Plumb Cut Angle (SS Angle 31.63)

Tongue (4.97) Blade (12.00) for Miter Box 2 Cord Polygon Gable Mould Hip Cross Cut Angle (SS Angle 22.50)

Tongue (3.31) Blade (14.42) for Frieze Block Plumb Cut Angle (SS Angle 12.94)

Tongue (4.97) Blade (14.42) for Frieze Block Cross Cut Angle (SS Angle 19.02) (Saw Bevel Angle 18.57)

Tongue (3.31) Blade (14.42) for Square Cut Fascia Plumb Cut Angle (SS Angle 12.94)

Tongue (4.97) Blade (14.42) for Square Cut Fascia Cross Cut Angle (SS Angle 19.02) (Saw Bevel Angle 18.57)

Tongue (0.88) Blade (4.97) for Hip Rafter Square Cut Fascia Plumb Cut Angle (SS Angle 4.18)

Tongue (4.97) Blade (14.42) for Hip Rafter Square Cut Fascia Cross Cut Angle (SS Angle 19.02) (Saw Bevel Angle 18.57)

## Octagon Framing Square Usage

### Octagon Framing Square usage: 9:12 Pitch

(Rafter Length Per Ft = 15.00) (Hip Rafter Length Per Ft = 15.80)

SS Angle = Speed Square Angle

Saw Bevel Angle produces compound Speed Square Angle
